SUMMARY

Adaptable Software Developer with a strong foundation in building and testing scalable applications. Leverages practical experience in cross-platform development (Flutter/Dart) and backend architecture (Node.js, PostgreSQL) to deliver robust digital solutions. Combining an award-winning project portfolio with enterprise QA automation experience, bringing a fast-learning, test-driven approach to web, mobile, and full-stack engineering teams.

EDUCATION

Universiti Teknikal Malaysia Melaka (UTeM) **Melaka, Malaysia**
Bachelor of Computer Science in Software Development (Hons.) October 2022 – March 2026
CGPA: 3.87

WORK EXPERIENCE

Teleport Platforms Sdn. Bhd. **W.P. Kuala Lumpur, Malaysia**
Quality Assurance Intern October 2025 – March 2026

- Engineered automated API regression testing scripts using the Karate Framework and Cucumber (BDD), successfully automating nearly 50 complex end-to-end business scenarios and integrating them into a Google Cloud Platform (GCP) CI/CD pipeline.
- Executed comprehensive end-to-end quality assurance during a major legacy system migration, achieving up to a 100% scenario pass rate in web composite services and maintaining high stability in core order APIs to prevent data corruption.
- Conducted deep-dive API network inspections and negative testing using Postman and Swagger UI, ensuring strict data integrity between user interfaces and backend server architectures.
- Managed the defect tracking lifecycle using Jira within an international Agile Scrum environment, performing cross-functional triage with developers to accelerate issue resolution and maintain high sprint velocity.

PROJECTS

Final Year Project **UTeM, Malaysia**
HeartCare – An AI-driven mobile application featuring a cardiovascular health assistant. March 2025 – Feb 2026
Role: Full-stack Developer.

- Engineered a full-stack cardiovascular health platform, integrating a Flutter frontend and an on-device TensorFlow Lite model (achieving 90% risk classification accuracy via 70,000 data entries) with a scalable Node.js backend deployed on Render and a Supabase PostgreSQL database.
- Engineered real-time "Family Mode" capabilities using Google Maps API for geolocation tracking and Firebase Cloud Messaging (FCM) for instant cross-device push notifications, secured by JWT authentication and bcrypt.
- Integrated OpenAI API File Search tools to generate contextual, clinical-backed treatment plans, directly driving product quality by conducting User Acceptance Testing (UAT) that yielded 89% positive feedback.
- Secured multiple national innovation awards, including Gold at iDRIVE 2025 and Silver at both the InnoGEN Challenge 2026 and WINSTEM 2025, while officially registering the intellectual property with MyIPO (CRLY2025M10255).

Digital Creative Marathon (DICRATHON) **UPSI, Malaysia**
TourEase – Tourist Assistant Mobile App. July 2024 – November 2024
Role: Back-end Developer.

- Solved a real-world tourism challenge in Malaysia during a hackathon by developing TourEase, a Flutter-based travel assistant app that optimised user experience by digitising tourism processes.
- Transformed static frontend designs into a functional platform by developing backend endpoints to capture, process, and store local vendor data (including business and location details) to support Malaysian SMEs.
- Integrated APIs such as OpenAI and Google Maps/Places and conducted API testing and performance validation

using Python scripts (terminal-based testing) and Postman, ensuring functionality, reliability, performance, and cost-effectiveness of databases and APIs.

- Secured 1st Place by pitching the solution at UPSI, achieved through collaboration with teammates in development.

EXTRACURRICULAR ACTIVITIES

CODE FOR INNOVATION Hackathon (D'FTMK-A-THON) 2025

- Competed in a 24-hour C++ hackathon presenting 8 local issues specific to Malacca and selected the waste management challenge to tackle.
- Contributed as a developer and overcame major technical setbacks mid-event by rebuilding a solution from scratch in under 12 hours, demonstrating adaptability, problem-solving, and rapid debugging skills.
- Secured 2nd Place out of 10 teams, demonstrating adaptability, teamwork, and rapid problem-solving under pressure.

Micro:bit Mentor – STGEMS x SULAM IoT Bootcamp and Challenge 2024

- Mentored a group of 4 primary school students, guiding them through development of an IoT-based Automatic Cat Litter Cleaner project featuring a two-step process (litter removal and refill) controlled via Micro:bit with Telegram notifications.
- Strengthened IoT foundations by guiding students to build hardware–software integrated projects with real-world applications.
- Recognised with a Bronze Award in the Bootcamp's Final Phase (Exhibition Phase), highlighting creativity, technical execution, and real-world applicability.

AWARDS & ACHIEVEMENTS

- **Silver Award** – InnoGEN Challenge 2026, UniKL.
- **Silver Award** – 1st World Innovation in STEM Competition (WINSTEM2025) 2025.
- **Gold Award** – International Development, Research and Innovation Exhibition (iDRIVE) 2025, UTHM.
- **Certificate of KYouthXGIFT Program Completion with Distinction (Top 15%)** – Khazanah Nasional 2025.
- **2nd Place** – CODE FOR INNOVATION Hackathon (D'FTMK-A-THON) 2025, UTeM.
- **Bronze Award** – STGEMS x SULAM IoT Bootcamp & Challenge 2024, UTeM.
- **1st Place** – Digital Creative Marathon (DICRATHON) 2024, UPSI.
- **Recipient** – Yayasan Bank Rakyat (YBR) Scholarship 2023 (No Bond).
- **Dean's List Awardee (All Semesters)** – UTeM (2022–2026).

TECHNICAL & PROFESSIONAL SKILLS

- **Programming Languages:** Dart, JavaScript, Python, C++, Java, SQL, HTML, CSS.
- **Frontend & Mobile:** Flutter.
- **Backend Frameworks:** Node.js, Express.js.
- **Databases:** PostgreSQL, MySQL, MongoDB, NoSQL.
- **Cloud & BaaS:** Google Cloud Platform (GCP), Microsoft Azure, Supabase, Firebase.
- **Testing & Automation:** Karate Framework, Cucumber (BDD), Postman, Swagger UI.
- **Architecture & DevOps:** RESTful API Development, CI/CD Integration, JWT Authentication, TensorFlow Lite (On-device AI), Object-Oriented Programming (OOP).
- **Tools & Version Control:** Git, GitHub, Jira, Slack, Notion, Miro, Figma, Visily.
- **Methodologies:** Agile (Scrum / Kanban).
- **Spoken Languages:** Bahasa Melayu (Native), English (Proficient).
- **Soft Skills:** Leadership, Problem-Solving, Adaptability, Project Management, Proactive Learning, Team Collaboration, Communication Skills, Resilience.
