PROFESSIONAL SUMMARY

First Class Honours Computer Science (Software Development) graduate with 6 months of QA automation internship experience at Teleport. Developed 50+ Karate and Cucumber regression tests for logistics order-management APIs, reducing repeatable regression execution from more than one hour manually to approximately 10 minutes, alongside hands-on manual, integration, regression and defect investigation across QA and UAT environments. Combines a software-development foundation with practical testing experience across APIs, backend systems and application workflows. Seeking a Junior QA Engineer role to continue developing test automation alongside strong manual testing fundamentals.

TECHNICAL SKILLS

- **Software Testing:** Manual Testing, Functional Testing, UI Testing, Integration Testing, Regression Testing, System Testing, Exploratory Testing, UAT, Test Planning, Test Case Design, Defect Reporting, Retesting and Fix Validation, STLC
- **Automation & API Testing:** Karate Framework, Cucumber BDD, Playwright (JavaScript - project), Postman, REST API Testing, JSON and Schema Validation, Selenium (Python - web automation project)
- **CI/CD:** GitLab CI/CD, GCP Cloud Build
- **Programming & Data:** JavaScript, C++, Java, Python, SQL, PostgreSQL, MySQL, MongoDB
- **Tools & Practices:** Jira, Miro, Notion, Git, Bitbucket, Agile/Scrum, SDLC

PROFESSIONAL EXPERIENCE

QA Automation Intern

Kuala Lumpur, Malaysia

Teleport Platforms Sdn. Bhd.

Oct 2025 – Apr 2026

- Designed and executed test plans and test cases in Jira for logistics order-management workflows, covering expected behaviour, edge cases, test data, preconditions and integration scenarios.
- Developed 50+ automated regression tests using Karate Framework and Cucumber BDD for order creation, retrieval and assignment workflows, reducing repeatable regression execution from more than one hour manually to approximately 10 minutes.
- Performed manual functional, UI, integration, regression and REST API testing across QA and UAT environments, validating API responses, JSON schemas and backend data.
- Identified 3 critical pre-production defects involving response-array validation, incorrect item-type mapping and duplicate order-number behaviour, then worked with developers to reproduce issues and verify fixes.
- Investigated failed tests through API requests, responses, application behaviour and backend logs, and contributed to GCP Cloud Build YAML supporting repeatable automated test execution across QA and UAT environments.

RELEVANT PROJECTS

Playwright UI Automation Practice: Cinema Booking Flow

Sep 2026

Core Technologies: Playwright, JavaScript

- Automated a multi-step cinema-booking workflow covering movie selection, date and time selection, authentication gating and seat-selection navigation.
- Used Playwright locators, role-based selectors and popup handling to automate browser interactions across a dynamic end-to-end web flow.

C++ Unit Testing & CI Practice

Aug 2026

Core Technologies: C++, GoogleTest, GoogleMock, CMake, CTest, GitLab CI

- Built unit tests around dependency-injected C++ components using GoogleTest and GoogleMock, covering expectations, matchers, return behaviours, exceptions, fakes and mocks.
- Configured a CMake and CTest workflow with a GitLab CI pipeline on a Windows runner using vcpkg, successfully building the test project and passing all 10 automated tests.
- Practised isolating external dependencies behind interfaces and constructor injection to make components easier to test independently.

HeartCare: AI-Driven Cardiovascular Health Assistant

Mar 2025 – Feb 2026

Core Technologies: Flutter, Node.js, PostgreSQL (Supabase), TensorFlow Lite, RESTful APIs

- Built and tested a full-stack mobile application integrating Flutter, REST APIs, PostgreSQL-backed services and an on-device TensorFlow Lite model, performing functional and system testing to validate end-to-end behaviour and data flow.
- Conducted UAT with 50+ participants, with more than 80% reporting a positive experience.
- Received Gold at iDRIVE 2025 and Silver awards at WINSTEM 2025 and InnoGEN 2026.

MYCare: Community Support Mobile App

Nov 2024 – Jan 2025

Core Technologies: Flutter, Python (Selenium, BeautifulSoup), PostgreSQL

- Led a student Agile team developing a community-support mobile application, coordinating feature development and translating coursework requirements into technical tasks.
- Built Python web-scraping automation using Selenium and BeautifulSoup to collect information from 10+ external web sources for use within the application.
- Validated scraped data before database and application integration, checking expected fields, content consistency and downstream retrieval.

TourEase: Tourist Assistant Mobile Application

Jul 2024 – Nov 2024

Core Technologies: Flutter, Python, Azure PostgreSQL, Postman, RESTful APIs

- Developed application features integrating third-party REST APIs and backend data into a tourist-assistance mobile application.
- Used Postman and Python checks to validate HTTP status codes, required JSON fields and response structures before integrating external API data into application workflows.
- Refined API usage around the data required by the application, reducing unnecessary requests and associated third-party API consumption.
- Contributed to the functional prototype that received First Place at the UPSI Digital Creative Marathon.

LEADERSHIP & INVOLVEMENT

CODE FOR INNOVATION Hackathon (C++, 24 Hours)

Apr 2025

- Adapted when the team's initial solution became unworkable midway through development, switching to a different problem with 12 hours remaining and building a simpler C++ solution focused on the core requirements.
- Completed and pitched the revised solution within the remaining time, contributing to a second-place finish among 10 teams.

Workshop 1 Facilitator (C++)

Nov 2024

- Guided university students through C++ project roadmaps and development, facilitating hands-on, project-based learning to build foundational coding skills.
- Explained core Object-Oriented Programming (OOP) concepts in C++ during a project workshop, using the students' project context to clarify how the concepts could be applied in their development work.

Micro:bit UTeM Programme Facilitator & Mentor

May 2024 – Nov 2024

- Facilitated Micro:bit workshops for 12 secondary school students at UTeM, guiding them through coding fundamentals and evaluating their solutions across 3 custom-designed real-world problem scenarios.
- Conducted hands-on Micro:bit programming training for 20 primary school students, teaching programming fundamentals, problem decomposition and hardware interaction, with 85% completing all assigned tasks.
- Guided student groups through hands-on hardware-software integration projects, contributing to a Bronze Award during the project exhibition phase.

EDUCATION

Universiti Teknikal Malaysia Melaka (UTeM)

Bachelor of Computer Science in Software Development (Hons.)

CGPA: 3.88/4.00

Melaka, Malaysia

Oct 2022 – Apr 2026

CERTIFICATIONS, AWARDS & RECOGNITION

- ISTQB Certified Tester Foundation Level (CTFL) v4.0: Self-study in progress
- TalentLabs Certified Associate in Back-End Development: Completed
- Certified Quantitative Risk Management (CQRM): Examination passed, certification pending
- KYouthXGIFT 2025: Top 15% Distinction
- Dean's List Awardee: All Semesters, UTeM
- Yayasan Bank Rakyat Scholar
